IME MODEL 8080FFR	8080FF	8080FR
	9008FF	9008FR

All IME models listed above are available with an Infrared Remote Controller. This unique feature allows the setting of all the required parameters either through the Membrane switches which are on the panel or on the field device or by utilizing the remote.

The advantage of using the remote especially on the field devices is it is not necessary to open the cover of the device and all parameters can be reviewed and adjusted remotely.

All the remote units are certified to be used in hazardous areas.
